Rent	98	91	-7.8%	Medium
Sales	14,986	11,504	-23.2%	Low

How to read this forecast

What it is. A statistical forecast (exponential smoothing with a damped trend and yearly seasonality) trained on monthly DLD data since January 2015. It is rebuilt automatically every day when new data arrives.

The shaded area is the 95% likely range. The dashed line is the most likely path.

How accurate it has been. Tested on the last 12 known months (Oct 2025 to Sep 2026), the average error was 2.6% for sale prices, 14.5% for rents and 41.4% for sales volumes. Actual values fell inside the shaded range in 12 of 12 months for prices, 9 of 12 for rents and 11 of 12 for sales.

Use it for direction, not exact numbers. Sales volumes swing with launches and the wider economy, so treat the sales forecast as a rough guide only.
